Education

Sep 2022
to June 2027

University of California San Diego

Ph.D. in Computer Science & Engineering

- Grad-level Coursework: Deep Learning, Unsupervised Learning, Deep Generative Models, Probabilistic Reasoning, Learning Algorithms, Recommender Systems, & AI Agents
- Research Interests: Preference-Based Reinforcement Learning, Conversational Audio Models, Social Signal Processing, Autonomous Vehicles, Digital Mental Health Interventions
- Thesis Topic: Preference-Based Reinforcement Learning for Conversational Audio Models
- Advisor: Nadir Weibel

Sep 2019
to June 2021

University of California San Diego

B.S. in Cognitive Science: Machine Learning & Neural Computation

Minor in Computer Science & Engineering

- Undergrad-level Coursework: Supervised, Unsupervised, Reinforcement, Deep Learning, Genetic Algorithms, ML for Brain Computer Interfaces, & Deep Learning for Music

Research Experience

Sep 2022
to June 2027

University of California San Diego

Graduate Student Researcher

- Optimized a Mixture of Experts (MoE) model, experimenting with weight averaging to enhance performance while reducing computational costs.
 - Collected a large scale preference dataset (n=3,000; 18,000 pairs) via Prolific and Qualtrics
 - Developed a Retrieval-Augmented Generation (RAG) pipeline to improve a large language model's understanding of Dialectical Behavior Therapy (DBT) for real-time mental health interventions.
 - Additional projects in misinformation perception, content moderation, and autonomous vehicle trust
- Core Competencies: Machine Learning, Dataset Development, Large Language Models (LLMs), Mixture of Experts (MoE), Retrieval-Augmented Generation (RAG), Model Optimization, Human-Centered AI, AI for Mental Health, Quantitative Research

July 2021
to Aug 2022

University of California San Diego

Undergraduate Student Researcher

- Web Scraped Facebook using Selenium to make inferences on a user's connections
 - Designed logistic regression models capable of detecting hate speech on Twitter & used word embeddings to bin dataset into different types of hate speech
 - Designed and implemented a UI in React with a Node and Flask backend to help non-tech savvy users identify faulty ML systems
 - Created SQL databases on an AWS server and conducted queries to support UI backend
 - Built Balltree with various similarity metrics to show similar tweets that may be mislabeled
- Core Competencies: XAI, Natural Language Processing (NLP), Web Scraping, Hate Speech Detection, Word Embeddings, Full-Stack Development, Database Management

Other Professional Experience

June 2026
to Sept 2026

Adobe

Machine Learning Engineering Intern (Incoming)

- Joining the Digital Experience (DX) AI & Product Engineering team to work on ML/AI systems for marketing automation, including AI agents and reinforcement learning applications.

Core Competencies: Reinforcement Learning, AI Agents, Machine Learning Systems, Automation

Other Professional Experience (Cont.)

Jan 2022 to Aug 2022	Virufy Associate Audio Machine Learning Engineer • Peer review ML research involving cough audio classification in Tensorflow and SK-Learn • Finetuned existing models via transfer learning to conduct audio classification • Utilize Sagemaker to explore new feature and architecture combinations with novel data Core Competencies: Audio Feature Analysis, PyTorch, Peer Review, Sagemaker

Projects

Selected Projects	Vehicle Motion Forecasting • Explored various model architectures (MLP, LSTM, CNN, Transformer) to predict motion of a car • Selected and normalized relevant features (position, velocity, lanes) from the Argoverse dataset Snake Reinforcement Learning • Utilized N-Step Temporal Difference and SARSA methods to play snake and compared performance • Designed a custom Open-AI gym environment and deep Q-Learning agent in keras that reached level 20 consistently (max 40) with a small state space of 10 and action space of 3 Generalizable Deep Speech Anonymization • Leveraged a Wasserstein GAN to learn a distribution over language-agnostic speaker embeddings for speech anonymization. • Used a modified loss to bias the generative model towards an anonymized distribution GLOBEM Supervised and Exploratory Analysis • Use generalized linear model to select features from GLOBEM dataset for PHQ-4 and PANAS prediction • Conduct gridsearch with random forest classifier and k-fold validation • Analysis of best model's features using SHAP values
----------------------	---

Miscellaneous

Volunteer	3x Dept. Social Lead UC San Diego Visit Day Lead Founder of the Graduate Student Volleyball Party (GSVP) 5x GRADWIC Mentor
Reviewer	CHI '25, '26
Awards	NLM T15 Training Grant Fellowship
Tech Skills	Programming Languages: Python, SQL, Java, CSS, HTML, C++, C, Javascript Frameworks: Pandas, NumPy, SK-Learn, TensorFlow, Keras, PyTorch, Selenium, React, Node, Flask Misc: Git, HuggingFace, Sagemaker, MySQL, AWS, Illustrator, Lightroom, Photography, Firebase
Languages	English, Spanish, Farsi, Hebrew
